"Cloning and sequencing of a 2,5-dichloro-2,5-cyclohexadiene-1,4-diol
dehydrogenase gene involved in the degradation of gamma-
hexachlorocyclohexane in Pseudomonas paucimobilis.";

J. Bacteriol. 176:3117-3125(1994).

-1- FUNCTION: DEGRADATION OF 2,5-DICHLORO-2,5-CYCLOHEXADIENE-1,4-DIOL
(2,5-DDCL) INTO 2,5-DICHLOROTYDROQUINONE (2,5-DCHQ).

-1- PACHWAY: DEGRADATION OF GAMMA-HEXACHLOROCYCLOHEXANE.

-1- SIMILARITY: BELONGS TO THE SHORT-CHAIN DEHYDROGENASES/REDUCTASES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Probable cysteine CSD OR TM1371.

**Analysis of the chromosome sequence of the legume symbiont

**Sinorhizobium meliloti strain 1021.*;

Proc. Natl. Acad. Sci. U.S.A. 98:9877-9882(2001).

-!- FUNCTION: Synthesizes alpha-1,4-glucan chains using ADP-glucose.
-!- CATALYTIC ACTIVITY: ADP-glucose + {(1,4)-alpha-D-glucosyl](N1).

-*ADP + {(1,4)-alpha-D-glucosyl](N+1).
-*PATHWAY: Glycogen blosynthesis; second step.
-*INTLARITY: BELONGS TO THE BACTERIAL/PLANT GLYCOGEN SYNTHASE
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Capela D., Barloy-Hubler F., Gouzy J., Bothe G., Ampe F., Batu-

-I- FUNCTION: CAN METABOLIZE THE AFLATOXIN B1 (AFB1) PROTEIN-BINDING
DIHYDRODIOL BY FORMING NONBINDING AFB1 DIALCOHOL. COULD BE
INVOLVED IN PROTECTION OF LIVER AGAINST THE TOXIC AND CARCINGGENIC
EFFECTS OF AFLATOXIN B1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Oxidoreductase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              regulation, where specific antisera against the N-and/or C-terminal domains of PRRP is used to identify alterations in PRRP synthesis or levels; (3) a rat or human receptor encoded by a 1122 nucleotide sequence (S3), fully defined in the specification; (4) treating a person suffering from a disorder regulated by a receptor (II) encoded by a sequence of 1122 nucleotide sequence, fully defined in the specification, located in the central nervous system, by administering an agonist or antagonist to the receptor; and (5) treating blood pressure, by blocking of receptors of PRRP or its C-terminal fragment GlylleArgProValGlyArgPhe-NH 2 (S2). The products of the invention have analgesic and hypotensive activity. (I) is useful for regulating autonomic functions, such as increasing blood pressure. (I) is useful for treating pain, for manufacturing a medicament for regulating blood pressure, and for treating pain. Agonist and antagonist of (II) are useful for treating acute pain, inflammatory pain and neuropathic pain, for regulating autonomic functions and treating high blood pressure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cc ligand polypeptide 1992-131 which is capable of binding to a G
CC protein-coupled receptor protein. This peptide is used as an antigen to
CC prepare rabbit anti-bovine 1992-131 antibodies which are used in binding
CC assays. Pharmaceutical compositions containing this ligand may be used
CC as a pituitary function modulator, a central nervous system modulator
CC or a pancreatic function modulator. This ligand could have specific
CC applications as a prophylactic or therapeutic agent for dementia,
CC depression, hyperkinetic syndrome, disturbance of consciousness, anxiety
CC syndrome, schizophrenia, trauma, growth hormone secretory disease,
CC typer- and polyphagia, hyperlipidaemia, hypercholesterolaemia,
CC renal disease, Turner's syndrome, neurosis, astima, rheumatoid arthritis,
CC renal disease, Turner's syndrome, neurosis, amylotrophic lateral
CC schaol injury, transient brain ischaemia, epilepsy, amylotrophic lateral
CC degeneration, bone fracture, trauma, atopic dermatitis, osteoporosis
CC and/or oligonalactia assays can also be developed to screen companies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choricoarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus, abnormal saccharometabolism, abnormal lipidmetabolism or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAW97229-31 represent a ligand polypeptide derived fragments used to produce antibodies. The specification describes an agent for modulating prolactin secretion which comprise a ligand polypeptide or a salt, for a G protein coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypocvarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisaic. The agents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmeniopathy, autoimune disease, prolactionma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Use of G protein-coupled receptor ligands - for modulating prolactin secretion or placental function, e.g. for treating menopausal syndrome, tumours, autoimmune disease or abnormal pregnancy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences AAV49290-302 represent peptide fragments of the 19P2 ligand.

The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. sequences AAX49290-302 represent peptide fragments of the 19P2 ligand.

                                                                                                                                                                                The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function
                                                                                                                                                                                                                                                                                                                                  Disclosure; Page 27;

                                 hyperpolactinaemia, diabetes, cancer, pancreatitis, renal disease, Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinocerebellar degeneration, bone fracture, trauma, atopic dermatitis, osteoporosis and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                               This sequence represents a peptide fragment from a novel human type ligand polypeptide corresponding to amino acid residues 34 to 53 of the sequence represented in AAW31390 and is used in an assay to monitor ligand binding to the 6 protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, hyper- and polyphagia, hypernolation and additional additional and polyphagia of the prophylactic agent for the prophylactic agent for the prophylactic agent for consciousness, anxiety syndrome, schizophrenia, hyperligidaemia, hypercholesterolaemia, hyperglyceridaemia, hypercholesterolaemia, hyperglyceridaemia, hypercholesterolaemia, hyperglyceridaemia, hypercholesterolaemia, hyperglyceridaemia, hypercholesterolaemia, hyperglyceridaemia, hypercholesterolaemia, hyperglyceridaemia, hypercholesterolaemia, hypercholesterolaemia, hyperglyceridaemia, hypercholesterolaemia, hypercholesterola
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ligand peptide for G protein-coupled receptor - acts function in the central nervous system, pancreas and

                                                                                                                                                                                                                                                                                                                    This sequence represents a peptide fragment from a novel rat type ligand polypeptide corresponding to amino acid residues 33 to 52 of the sequence represented in AAW31383 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, hyper- and polyphagia, hyperripidaemia, hypercholesterolaemia, hyperglyceridaemia, hypercholesterolaemia, hyperglyceridaemia, finjury, runner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, ransient brain igchementa, entinger amylorrophic lateral schementa.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      18-SEP-1996;

                                                                                                    myocardial infarction, spinocerebellar degeneration, bone fracture, trauma, atopic dermatitis, osteoporosis, astima, epilepsy, infertility and/or ollogoalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand thus affecting activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                 This sequence represents a peptide fragment of a novel bovine pituitary derived ligand corresponding to amino acid residues 34 to 53 of the sequence in AAW31368 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein.                                 prolactinoma, infertility, impotence, amenorrhea, galactorrhea, acromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, Forbes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus, abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia.
                                                                                                                                                                          The present sequence represents a bovine pituitary-derived ligand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypocvarianism, genecyst cacegenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmenlopathy, autoimmune disease, prolactions in fertility imported amenorarbae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Use of G protein-coupled receptor ligands - for modulating prolactin secretion or placental function, e.g. for treating menopausal syndrome, tumours, autoimmune disease or abnormal pregnancy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     pituitary adenomatosis; brain tumour; emmeniopathy; autoimmune disease; prolactinoma; infertility; impotence; amenorrhea; galactorrhea; acromegaly; Chiari-Frommel syndrome; Argonz-del Castillo syndrome; Forbes-Albright syndrome; lymphoma; Sheehan syndrome; dyszoospermia; contraceptive; placental function; choriocarcinoma; hydatid mole; irruption mole; abortion; unthrifty fetus; abnormal saccharometabolism; abnormal lipidmetabolism; oxytocia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Fujii R, Hinuma S,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Bos

                                                                                                                               The present sequence represents a rat type ligand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypovarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmeniopathy, autolumnune disease, prolactinoma, infertility, impotence, amenorrhea, galactorrhea, caromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choricarcinoma, hydatid mole, irruption mole, abortion, unthifty fetus, abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia.

which is a ligand for the G-protein coupled orphan receptor designated C GPRIO (human) or UHR-1 (rat). Cells transformed with a vector containing the ligand polypeptide encoding DNA are used to produce a recombinant clipand polypeptide. The ligand polypeptide, and its fragments, modulate c function of the pituitary, central nervous system, pancreas and other ctissues and can be used to screen for agents that modulate binding of the CC polypeptide to the receptor; to quantify the amount of receptor in a c sample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; schizophrenia; disorders of growth hormone secretion; cancer; CC corrying the ligand polypeptide encoding DNA or its mutein are used to carrying the ligand polypeptide encoding DNA or its mutein are used to complete sequences; in receptor-binding assays; for production of Ab and contained to the polypeptide sequences; in receptor-binding assays; for production of Ab and contained the contained to the contained t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 14

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  pituitary-derived ligand polypeptide fragment
                                              ; in drug development; for gene therapy and to develop transgenic The present sequence represents a bovine genome-derived ligand ide fragment which is similar to the murine ligand-polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     σ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        transgenic animal; bovine

CC the ligand polypeptide encoding DNA are used to produce a recombinant of ligand polypeptide encoding DNA are used to produce a recombinant of function of the pituitary, central nervous system, pancreas and other ctissues and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a csample and to raise antibodies. They may also be used therapeutically, cc. q. to treat senile dementia; Alzhehmer's, Parkinson's or Huntington's cdiseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; cdiseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; cdiseases; critizophrenia; disorders of growth hormone secretion; cancer; contained the control of the polypeptide encoding DNA or its mutein are used to study the function of the polypeptide encoding DNA or its mutein are used to study the function of the polypeptide-expressing genes, as models of cdisease, for drug screening and as source of cell lines. The ligand completed encoding by production of Ab and creative noting development; for gene therapy and to develop transgenic animals. Sequences AAW95174 to AAW95178 represent antigenic animals. Sequences AAW95174 to AAW95178 represent antigenic animals which can be used for the preparation of anti-ligand polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Best Local Similarity Matches 6; Conserv
